

SUBJECT DATASHEET

Semester:	2010/11/1
Subject:	Environmental Protection Technologies II.
Code:	VEMKKVT212K
Responsible department:	Department of Environmental Engineering
Responsible department code:	MKKV
Responsible lecturer:	dr. József Kovács

Educational objectives:

The object of this lecture to summarise the methods developed for decrease the environmental impact of two important industrial brunch (traffic and agriculture) in evaluation, function and development of them.

Detailed content of the subject:

1. Definition and instrumental system of traffic. Development trends 2. Public traffic: vehicle and motor types. Alternatives for decreasing the pollutants emitted by internal ignition motors. 3. Waste material originated from public traffic. 4. Railway traffic. Development of internal combustion engine rail-cars. Railway intrumentations. 5. Instrumental system of air and water transport. Environmental effects. 6. Role of logistic knowledge in material transport and transit transports 7. Environmentally friend petrol stations and maintenance workshops. 8. Agriculture politics of EU States and Hungary. Internal and international levels of agrochemicals. 9. Chemical compounds used in agricultural industry. Fertilizers 10. Heavy metal pollutions in the soils. Aciditation of the soil. 11. Treatment and reuse of waste materials origin from plant production, animal husbandry and food industry. 12. Biological equilibrium and possibility in the future 13. Problems origin from animal preventions. Animal rights 14. Environmental effects origine from processing industry 15. Consultation. Written examination

Requirements:

to make two successful (>2,5 point in 0 - 5 scale) written examination from the two parts of lecture.
