

SUBJECT DATASHEET

Semester:	2009/10/1
Subject:	Soil- and Groundwater Protection
Code:	VEMLKVM412T
Responsible department:	Department of Environmental Engineering
Responsible department code:	MKKV
Responsible lecturer:	Dr. Erzsébet Horváth

Educational objectives:

knowledge in remediation recreation processes

Detailed content of the subject:

1. The influence of soil pollutants to the environmental elements and ecosystem; 2. data basics and soil monitoring; 3. The properties of soil-colloids; reactions on their surfaces: adsorption, adhesion, cohesion and protolysis; 4. Acid-base properties, redox reactions; 5. leaving the kolloid systems off 6. reactions between the soil and pollutants 7. The most important papameters influencing the pollution movement 8. organic pollutants and heavy metals in the soil, parameters influencing the mobility: solubility, pH, reactivity and persistency 9. Dosis and toxicity 10. Determination of heavy metals in the soil by the using of speciation analysis 11. organic micro-pollutants in the soil and their determination methods 12. Average; estimating of the damage, technologies and processes on the basis of caseworks

Requirements:

test and examination efficiency

Required and suggested references:
