

## COURSE DATASHEET

<b>Semester:</b>	2016/17/1
<b>Course:</b>	Nonmetallic-inorganic structural materials laboratory practice
<b>Code:</b>	VEMKSIB136S
<b>Responsible department:</b>	Institute of Materials Engineering
<b>Department code:</b>	MKSI
<b>Responsible instructor:</b>	dr. Margit Eniszné Bódogh

---

### Course objectives:

Production of glazed ceramics with semi-plant scale equipments in laboratory, qualification the obtained ceramic using the before learned measuring techniques

### Course content:

Calculation of ceramic body composition using given raw materials Particle size distribution measurement of ceramic raw materials powdered by ball mill Production of glazed ceramic wares in laboratory: Shaping of the plastic body by hand Investigation of physical properties of dried specimens. Phase composition, porosity and strength measuring of the heat treated samples Calculation of the glaze batch composition, preparing the glaze batch, production of glazes (melting, fritting, grinding and glazing) Qualification of the produced glaze: investigation of thermal expansion of glaze and ceramic body, chemical resistivity of glaze, color measurement Qualification of glaze surface, glaze faults and body/glaze interface by optical microscope Preparing of casting slip with optimum electrolit content, investigation the body formation. Shaping of oxide ceramics by cold isostatic pressing Investigation of morphology and strength of samples fired at different temperatures Color measurement and qualification of the surface of enameled wares before and after acid treatment and alkaline wash Investigation of chemical resistivity of refractories Investigation of setting time and mechanical strength of cement samples conaining different additives

### Requirements, evaluation and grading:

Compulsory attendance – making reports of each experiment, passing final test with a score of 2 or above

### Required and recommended readings:
