

SUBJECT DATASHEET

Semester:	2010/11/2
Subject:	Selected topics in physics
Code:	VETKFI1143S
Responsible department:	Institute of Physics and Mechatronics
Responsible department code:	MKFI
Responsible lecturer:	dr. Gábor Palágyi

Educational objectives:

To provide those basic elements of the physics which are related to information and computer science.

Detailed content of the subject:

1. Mechanics: force, energy, Newton's laws. 2. Electric charge, Coulomb law, Electric and magnetic fields. 3. Capacity, capacitor, oscilloscope 4. Electric current. Kirchhoff-laws. Voltage. RC circuit. 5. Maxwell-laws. 6. Basis of the Quantum mechanics. 7. Metals. Semiconductors. Diodes. 8. Transistors. Amplifiers. 9. Logical circuits. Digital-analogue and analogue-digital converters. 10. Fluorescence. Lasers. 11. Polarisation of the light. Optical fibres. 12. Liquid crystals. Practical applications: temperature-sensors, displays. 13. Statistical theory of liquid crystals.

Requirements:

exam
