

COURSE DATASHEET

| | |
|--------------------------------|---------------------------------------|
| Semester: | 2015/16/1 |
| Course: | Optics and Laser Technology |
| Code: | VEMKFI42120 |
| Responsible department: | Institute of Physics and Mechatronics |
| Department code: | MKFI |
| Responsible instructor: | dr. Zoltán Gugolya |

Course objectives:

The main objectives of this course are: presentation of the basic concepts and principles of optics, transfer the basic knowledge about lasers used in the industry and the everyday life, emphasize the possibilities providing by the laser techniques in planning the mechatronics systems and sensors.

Course content:

1. Maxwell's equations. The light is an electromagnetic wave.
2. Geometrical optics. Fermat's principle. Law of reflection. Snell's law.
3. Prism, total reflection of light, optical fiber
4. Mirrors
5. Thin lens
6. Optical aberrations
7. Optical instruments
8. Physical optics, interference, diffraction
9. Polarization
10. Black-body radiation, photoelectric effect. Wave-particle duality
11. Atomic models (Bohr, Schrödinger)
12. Light interactions with matter
13. LASER, metastabil nível, population inversion, metastable excited states, stimulated emission, , optical amplifier
14. Laser pumping energy
15. Specific laser systems

Requirements, evaluation and grading:

exam

Required and recommended readings:

Young, M.: Optics and Lasers. Springer-Verlag, 2000. Demtröder, W.: Laser Spectroscopy . Basic Concepts

UNIVERSITY OF PANNONIA
