

## SUBJECT DATASHEET

<b>Semester:</b>	2009/10/2
<b>Subject:</b>	Soil Science
<b>Code:</b>	VEMKFTB212T
<b>Responsible department:</b>	Department of Earth and Environmental Sciences
<b>Responsible department code:</b>	MKFT
<b>Responsible lecturer:</b>	Dr. Rita Szakácsné Földényi

---

### Educational objectives:

Acquaint the students with the composition, the biological activity as well as the chemical and physical properties of the soils. Overview of the principles of the soil classification and the processes playing role in the formation of different main types of soils.

### Detailed content of the subject:

? Different definitions, layers and functions of the soil. ? Soil forming factors and processes. ? Mineral composition of the soil. ? Formation of organic components of the soil, non-humic substances and their characterization. ? Humic substances and their characterization. ? Particle size distribution of the soil, its investigation methods, determination of soil texture. ? Characterization of soil structure, water, air and heat management of the soil. ? Physical-chemical and chemical processes in the soil I-II. ? Biological processes taking place in soils. ? Principles of soil classification, soil types in Hungary I-II. ? Erosion and deflation and protection against these soil degradation processes. ? Chemical soil degradation and the methods of protection.

### Requirements:

Participation in the lectures, one written successful paper about the subject, oral examination at the end of the term. Grading is based on the oral exam.
