

COURSE DATASHEET

Semester:	2016/17/1
Course:	Process Engineering Tools in the Petroleum Industry
Code:	VEMKFOM153A
Responsible department:	Department of Process Engineering
Department code:	MKFO
Responsible instructor:	dr. Lajos Nagy

Course objectives:

Introduction to process engineering problems and tools

Course content:

Introduction to process engineering problems, Information sources, models and tools of process engineering, Classification of process engineering tools, Models and using of models for problem solving, Tools for solving process engineering problems, Using Matlab for solving process engineering problems (reaction kinetics), Using Matlab for solving process engineering problems (reaction kinetics), Operation of dynamics simulators, Unisim simulator, Case study (distillation), Case study (heat exchanger), Case study (reactor), OTS systems

Requirements, evaluation and grading:

Grading is based on two midterm examinations and reports. Final mark above 80 excellent (5) 70-80 good (4) 60-70 medium (3) 50-60 pass (2) below 50 fail (1)

Required and recommended readings:

HYSYS Felhasználói Kézikönyv., Matlab and Simulink Felhasználói Kézikönyv., Bequette, B. W.: Process Dynamics: Modeling, Analysis, and Simulation, Prentice Hall, London, Brian Roffel, Ben Betlen: Process Dynamics and Control, Wiley, Donald R. Coughanowr: Process Systems Analysis and Control, McGraw-Hill
