

COURSE DATASHEET

Semester:	2014/15/2
Course:	Metalloorganic Chemistry I.
Code:	VEMKAKV212F
Responsible department:	Department of Organic Chemistry
Department code:	MKOK
Responsible instructor:	dr. József Kaizer

Course objectives:

Course content:

1. Historical Development and Current Trend sin Organometallic Chemistry; Classification of organometallic Compounds; Energy, Polarity and Reactivity of the M-C Bond.
2. Main-Group organometallics; Methods of Preparation; Alkali Organometallics.
3. Organometallics of Groups 2 and 12.
4. Organometallics of the Boron Group.
5. Organoelement Compounds of the Carbon Group.
6. Organoelement Compounds of the Nitrogen Group.
7. Organoelement Compounds of Selenium, Tellurium; Organometallics of Copper, Silver and Gold.
8. Organometallic Compounds of the Transition Elements.
- 9-10. The 18-Valence-Electron Rule, Ligands.
11. Metal-Metal Bonds and Transition Metal Atom Clusters.
12. Organometallic Catalysis I.
13. . Organometallic Catalysis II.
14. Summary
15. ZH

UNIVERSITY OF PANNONIA
