

SUBJECT DATASHEET

Semester:	2010/11/2
Subject:	Technical Fluid Mechanics and Engineering Thermodynamics (Part II.)
Code:	VEMKGEB242H
Responsible department:	Department of Mechanical Engineering
Responsible department code:	MKGE
Responsible lecturer:	Dr. András Bálint

Educational objectives:

To be acquainted with the fundamentals of thermodynamics and practical applications.

Detailed content of the subject:

Fundamentals of thermodynamics. 1-st Fundamental Law of thermodynamics. Change of heat and mechanical energy. 2-nd Fundamental Law of thermodynamics. State equations of ideal gases. Change of states of ideal gases. Cycles: Carnot cycle, Thermal efficiency. Irreversible processes. Change of states of ideal gases. Change of states of real fluids on i-s and graphs Real cycles: Rankine cycle, refrigeration cycle. Thermodynamic processes and the entropy. Thermodynamic efficiency. Force cooling, refrigerating machine (compression-type and absorption machine). Heat conduction in medium at rest, with different boundary conditions. Heat conduction in medium in motion. Heat transfer. Application of Similitude Theory. Transmission of heat with respect constant and changing temperature difference. Parallel-flow and counterflow heat exchanger. Linear equations of heat exchangers, with respect parallel flow, counterflow, mixing box, and different systems. Heat exchanger devices. Heat insulation.

Requirements:

Taking part in lectures and seminars, successful test
