

SUBJECT DATASHEET

Semester:	2010/11/1
Subject:	Integrated biotechniques laboratory practice
Code:	VEMKBMB432B
Responsible department:	Research Institute on Bioengineering, Membrane Technology and Energetics
Responsible department code:	MKBM
Responsible lecturer:	dr. Katalin Bélafiné Bakó

Educational objectives:

The aim of the measurements is to study integrated processes like ED and pervaporation with bio system. Students are work individually or groups of 3-4.

Detailed content of the subject:

1. Integration of a complex system: case study.
2. Electrodialysis, selective acid removal from a bio reaction.
3. Pervaporation aided enzyme reactor, design and optimisation.
4. Integration of previous systems to a industrial method (SUPREPRO).

Requirements:

The accomplishment of the all measurements. Preparing a related report and a preceding test.

Required and suggested references:
