V P

UNIVERSITY OF PANNONIA

COURSE DATASHEET

Semester: 2014/15/2

Course: Down-stream processing lab training

Code: VEMKBMB332F

Responsible department: Research Institute on Bioengineering, Membrane Technology and Energetics

Department code: MKBME

Responsible instructor: dr. Béla Nándor Nemestóthy

Course objectives:

Study downstream processes like centrifugation, membrane separation. Students are work individually or groups of 3-4.

Course content:

- 1. To carry out a whole fermentation process (steps, sampling, decontamination)
- 2. Centrifugation, liofilzation Ultrafiltration (3DTA)
- 3. Adsorptive product recovery
- 4. Extractive Product recovery

Requirements, evaluation and grading:

Terms of signature:

Accomplishment of the allocated measurements.

One substitution is allowed.

Average of the final test and the lab tests.

It's can be improved on time.

Required and recommended readings:

Ladisch, Michael R Bioseparations Engineering: Principles, Practice, and Economics. Wiley. 2001

Pécs Miklós: A biológiai iparok elválasztási műveletei BME 2010
