

COURSE DATASHEET

Semester:	2015/16/1
Course:	Up-to-date Bioseparation Techniques Lab. Practice
Code:	VEMKBMB332K
Responsible department:	Research Institute on Bioengineering, Membrane Technology and Energetics
Department code:	MKBME
Responsible instructor:	dr. Béla Nándor Nemestóthy

Course objectives:

Basic introduction to bioseparation techniques.

Course content:

1. Filtration, centrifugation.
2. Ultrafiltration.
3. Flocculation.
4. Adsorption.
5. Adsorption in fluid layers.
6. Fluid-fluid extraction.
7. Fluid-solid extraction.
8. Evaporation, rectification.
9. Crystallization.
10. Chromatographical methods.
11. Simulated moving layer chromatography.
12. Ion-exchange chromatography.
13. Supercritical fluid chromatography.
14. Chiral separation methods.
15. Report.

UNIVERSITY OF PANNONIA

COURSE DATASHEET

Semester:	2015/16/1
Course:	Up-to-date Bioseparation Techniques Lab. Practice
Code:	VEMKBMB332K
Responsible department:	Research Institute on Bioengineering, Membrane Technology and Energetics
Department code:	MKBME
Responsible instructor:	dr. Béla Nándor Nemestóthy

Requirements, evaluation and grading:

Terms of signature:

Accomplishment of the allocated measurements.

One substitution is allowed.

Average of the final test and the lab tests.

Required and recommended readings:
