

## SUBJECT DATASHEET

<b>Semester:</b>	2010/11/2
<b>Subject:</b>	Process Design I
<b>Code:</b>	VEMKEL3253A
<b>Responsible department:</b>	Department of Hydrocarbon and Coal Processing
<b>Responsible department code:</b>	MKOL
<b>Responsible lecturer:</b>	dr. Gyula Deák

---

### Educational objectives:

Development of ability for recognising the technical and economic aspects of the chemical processes for process design and intensification, for transformation and utilisation of existing equipments by the means of theoretical knowledge of chemical engineering and design softwares

### Detailed content of the subject:

1. Tasks and means of process design. A hierarchical approach to conceptual design. 2. Engineering economics I. Structure and prediction of total capital investment costs. Cost indexes. 3. Engineering economics II. Structure of production costs. Production cost estimation. 4. Engineering economics III. Measures of process profitability, estimation of profitability. Simplifying the economic analysis for conceptual design. 5. Input information for process design, choosing between batch and continuous processes. 6. Input-output structure of the flow-sheet. 7. Recycle structure of the flow-sheet. 8. Material and heat balances. 9. Reactor selection and design. 10. Synthesis of separation system I. 11. Synthesis of separation system II. 12. Application of simulation programmes in calculation of the material heat balances. 13. Shortcut design procedures. 14. Conceptual design procedure for solids processes. 15. Conceptual design procedure for batch processes. 15. Conceptual design procedure for batch processes.

### Requirements:

Examination paper: four times (min. 50%)

### Required and suggested references:
