

## COURSE DATASHEET

<b>Semester:</b>	2014/15/2
<b>Course:</b>	Industrial catalysis
<b>Code:</b>	VEMKTEV214K
<b>Responsible department:</b>	Department of Hydrocarbon and Coal Processing
<b>Department code:</b>	MKOL
<b>Responsible instructor:</b>	Dr. Jenő Hancsók

---

### Course objectives:

Combination of theoretical and practical chemical engineering knowledge on the area of catalysis.

### Course content:

1. The place and role of the industrial catalysis in the hydrocarbon processing industry. Historical review of industrial catalysis. Classification of catalytic processes. Homogeneous and heterogeneous catalysis. Enzymatic catalysis.
2. Requirements of catalysts, properties for applicability: activity, selectivity, stability, morphological properties, mechanical stability, shape and size, thermal stability, period of activity, lifetime, reproducible production, cost.
3. Classification, design and selection of catalysts. Ideal and optimal catalysts.
4. Catalysts for homogeneous application.
5. Heterogeneous catalysts I.
6. Heterogeneous catalysts II., role of metal components and promoters.
7. Shape selective catalysts.
8. Examples for catalysts production.
9. Basic knowledge of kinetics.
10. Survey of catalytic systems and reactor systems. Aspects of selection of reactors and reactor arrangements.
11. Operation of catalytic reactors: checking process before catalyst loading, start-up of different type of catalysts (drying, pre-treatment etc.), continuous checking of process parameters, catalyst sample taking during the operation etc.
12. Regeneration of catalyst ("in situ" and "ex situ").
13. Preparation of catalysts for metal content recovery, unloading of reactors, hazards, safety procedures.
14. Recovery and recycling of metal components of catalysts.
15. Catalytic processes of the hydrocarbon industry and the environmental protection.

### Requirements, evaluation and grading:

The method of scoring is written examination. Minimum requirement is 50%. For the score of 5 higher than 85% is required.
